

Sleeking foil roll

Laminating foil

COD. TRNFOIL14-25

DESCRIPTION

Toner reacting foil also known as 'sleeking' being presented in reels very similar to those of normal laminating films, can be used on various reel laminators, including the Plasti 330, the Plasti 635, the Plasti 1100 and semi or fully automatic Plasti 350 EVO and XP (these equipped with proper motorized rewinder). The foil combines with toner applied by laser printers on the surface. Ideal multistep application may include printing-lamination-over printing-foiling. Some of the foils underneath can also be overprinted with the advantage of creating amazing color flare effects. For correct foil adhesion on the toner it's recommended to use full toner coverage (no feather). The result may not be consistent with some printers and support.
