

## **BOPP Standard film**

### **BOPP roll thermal laminating film**

**COD. DFP635**

---

#### **DESCRIPTION**

BOPP film for dry laminating on offset print. Hot film with excellent optical characteristics, available in different heights. 100% environmentally friendly, no solvent glue, no PE adhesive (which may turn into color change after lamination), suitable for automatic separating machines thanks to its burstable feature. The Corona treatment is applied to increase the wettability of the film, improve the anchoring and the adhesion between the surface and the printing ink (overprinting) to BOPP films. BOPP is the ideal solution for mass laminating volume needs. Film suitable for food contact. The material can be overprinted, gilded, silk screen printed. The most economic product of the range.
