

# Auto Cut

## Automatic friction fed business card cutter

COD. DRBCUT

---

### DESCRIPTION

Auto Cut is an extremely versatile and intuitive automatic business card cutter. It is equipped with a friction sheet feeder (paper stack up to 25 mm thick) which allows you to make business cards in one single step quickly. Guarantees the cutting of paper up to 350 gr. The business card cutting width is preset on the cutting module installed in the machine (85 or 90 mm), but it can be customized on request. The length of the cut is instead set via the control panel and allows maximum flexibility and minimum cuts up to 25 mm (minimum trimming 2 mm). The compensation of any printing skewness or print not perfectly registered on the sheet is guaranteed by the possibility of varying the paper entry angle on the feeder and by the read of proper printing mark setting the start cutting. Rotary creasing and perforation modules are also available. A cutting module of 85 or 90 mm (width of the finished card) is included with the machine.
