

EasyFoil

Computerized gilding machine for hot foil application

COD. DPRESEY

DESCRIPTION

EasyFoil is a digital printer that is able to transfer colored foil to every type of flat surface. The machine works with standard PDF files as if it was a common printer. Connect EasyFoil to your computer, download the software and start printing. EasyFoil allows to print customize texts on books, notebooks, telephone books and much more. Thanks to the unique working process, EasyFoil doesn't need any clichè or special inks. Great flexibility and high value result on a little investment even for low scale production. You can place the plug & play printer on your desk, connect it up the computer, install the software and start printing. It will always offer the best functionalities thanks to the automatic software updates. You can print texts, pictures, logos, special fonts and much more. Can also print on book cover spine, paper and cardboards. Special de-boss applications can be performed without foil on Morbipel and Sytle covers. EasyFoil can print in different surfaces and materials, thanks to the adjustable pressure it is possible to print in flat surface, smooth or semi-smooth surface (ex. Balacron and poliuretanic materials).
