

Piega Farm 30

Pharmaceutical use automatic folding machine

COD. DPTG-FARM

DESCRIPTION

Not many paper-folding machines can handle pharmaceutical folding today. Pharmaceutical companies and other businesses that insert instructional documentation in their goods require extremely tight, precise and small folds. This machine, which use 4 folding plates, can provide up to 16 folds on the same sheets having one A3 sheet folded into a 4 cm wide folded document. It's motor, which features an adjustable working speed, is capable of running at a speed of up to 12.000 sheets per hour. A vertical stacking tray takes your tiny folded material and vertically stacks it for convenience and for high-capacity folding management purposes. An optional scoring wheel can score folded material as it leaves the machine, making it easy to fold in half for insertion into boxes or bottles.

TECHNICAL SPECIFICATIONS

- Clutch control linked with counter and feeder system for highly accurate counting
- Vertical stacker collects small folded paper
- Powerful PCB-controlled DC motor for durability
- Adjustable folding speed

Wide feed roller for accurate paper folding
Includes pressure adjuster for easy paper feeding
Simple adjustment for different paper thickness
Set standard and non-standard fold with ease
