

HP-Hover

Automatic opening heat press with 'hover' function

COD. DPRESHOV

DESCRIPTION

The only one of its kind, this manual heat press with automatic opening includes an innovative characteristic that allows to work with the upper surface suspended on the printable material without contact to guarantee more brilliant colours and a better endurance on DTG applications. In its standard use as a traditional heat press it adapts to the most different applications thanks to its 40x50cm plate and its interchangeable optional plates in different size and shapes. The insertion procedure is extremely easy thanks to the wide opening of the upper plate up to 50°C (differently from the 35°C on standard machines). The heated surface is covered with a removable and washable cloth. Optional plates: 15x15cm- 15x50cm - 15,5x25,5cm - 20,5x25,5cm - 15x50cm.

TECHNICAL SPECIFICATIONS

Plate dimensions: 40x50 cm
Automatic opening
Lower plate is interchangeable
Adjustable mechanic pressure

Maximum printable thickness: 15 mm

Maximum temperature: 225°C

Weight: 56 kg

Energy consumption: 1,8 kW
