

HP-Mono

Pneumatic heat press

COD. DPRESMONO

DESCRIPTION

Single plate pneumatic heat press designed for high productivity. It can be used with any type of support: stretch covers, t-shirts, sweatshirts, bags, puzzles, magnets, coasters, cushions and much more. HP-Mono guarantees maximum working efficiency and proven reliability thanks to the solid steel structure. Equipped with digital control panel for quick temperature management (up to 225°C), countdown timer (adjustable up to 999 seconds) and current temperature reading. The base plate moves as a drawer, thus allowing convenient alignment of the objects to be printed. The adjustable pressure is produced with compressed air, which means working with consistent and reproducible results. The simple closing system with safety buttons and the hydraulic opening with gas springs reduce operator fatigue, especially in long runs.

TECHNICAL SPECIFICATIONS

Work surface: 40x50 cm

Drawer lower shelf to facilitate the positioning of the material on the surface in complete safety

Digital regulator of temperature, time and counting of the pressing processes

Easily adjustable pneumatic pressure
Suitable for high workloads
